MODULE 3–ASIAN VEHICLE MAKERS

A-2v: Video: Tech-Trends Trivia
What was the first Japanese nameplate vehicle to be built in the U.S.? (pause) 1982 Honda Accord

B-1v: Video: Technology On Infiniti JX35
The latest Infiniti has some features not only unique to Infiniti, but to any vehicle make and model.

Every vehicle has a tire pressure monitoring system. But for 2013, Infiniti has a unique system that uses both audio and visual signals. These signals help maintain correct tire pressure, without the use of a tire gauge. When the tire reaches the appropriate pressure, the hazard lights flash and the horn sounds to let the owner know to stop filling the tire. Note this feature when filling a tire in the repair facility.

Several vehicles have a knob you can turn to select different drive modes, but have you ever seen a SNOW setting? If you live in a snowy climate, you understand how handy that is.

To prevent collisions when backing up, there's the Backup Collision Intervention system. If you're backing up and a vehicle appears to be entering your path, first there's a visual warning, then audible beeps, and finally the car takes over, applying the brakes first gently, then completely, to avoid a collision.

C-3v: Video: Tech-Trends Trivia
In 1932, the vehicle makers DKW, Wanderer, and Horch joined which vehicle maker to form one company that still exists today? (pause) The vehicle maker is Audi, and the merger is depicted by four intersecting circles in the emblem.

E-7v: Video: Tech-Trends Trivia
What does the intersection of the two perpendicular ovals in the Toyota logo represent? (pause) Mutual trust between the customer and Toyota
